

Snowdonia Growth Fund

The Snowdonia Fund

| Fund Strategy |

- Our objective is to create sustainable performance with the help of influences such as asset allocation, sector allocation, cross sector themes and manager style.
- We aim to build a portfolio with relatively independent themes, operating simultaneously and resulting in a more attractive combination of risk and return. This is carried out with the help of our rigorous quantitative and qualitative fund selection process, which is focused on manager ability to produce enhanced returns over the longer term.
- Our style is a combination of both bottom-up and top-down. Top-down analysis dictates our specialist fund allocation, whereas the bulk of our decisions are based on bottom-up analysis.

| Fund Objectives |

To provide long term capital growth from a portfolio of global investments. To be managed such that a maximum of 100% of the Fund's assets will be exposed to equities. The Fund may achieve this by investing in units in collective investment schemes and may also invest in equities, fixed interest securities, money market instruments and warrants.

Snowdonia Growth Fund

The Snowdonia Fund

Fund developments and comments

Snowdonia Growth Fund, Investment Manager - Robert Allinson

After enjoying solid gains across the board last month, global equity markets reversed somewhat and suffered from modest declines. The pullback across various regions was relatively uniform, with declines in the 1% range. The reversal was triggered by the release of some softer data from the US, but generally we have seen a gradual erosion

of investor confidence over the solvency situation in Greece and Portugal. In particular, the default rate implied by Greek government bond prices (with 2 year bond yielding around 24%) suggests very little confidence that Greece can extricate itself from the current debt burden without a meaningful amount of default in one form or other. It is likely that markets will remain sensitive to this issue, as well as the on-going woes of Portugal, Spain and Ireland, until such time as there is a realistic solution to the debt spiral.

Elsewhere, China is continuing with the process of tightening bank lending activity with the aim of constraining inflation. In the US, recent data releases show that the economic recovery is still very fragile – employment growth is decelerating anew and housing/construction activity remains moribund. Corporate profitability remains an important bright spot and investors believe that this will continue to support equities markets as long as the global economy continues to expand.

For fixed income/bond markets, weaker incoming data and a rise in EU-related risk aversion has helped prices in G7 government bonds to strengthen – indeed, the gilt market returned in excess of 1% during the month. Despite the fact that inflationary pressure continue to climb in the UK, Northern Europe and Asia, bond markets are clearly assuming that this will prove transitory. Clarity over the trajectory and sustainability of economic growth in the months ahead will be critical to bond markets once the Federal Reserve's QE2 purchase program ceases at the end of June.

The total return performance of the Fund for May was -1.3% versus a benchmark return of -0.5%.
